📂 Technical Projects

Bard ↗ Aug 2022 – present
Creator, Software Engineer

Bard is an open-source session replay and conversion analysis tool.

- Engineered data ingestion and retrieval system optimized for high write volume and complex analytical queries over large datasets using RabbitMQ, Clickhouse, Express, and PostgreSQL
- Augmented existing open-source recording engine (rrweb) with session management functionality and published it as an npm package for easy instrumentation
- Developed Bard's UI using React and Material UI enabling the visual analysis of user sessions in the context of conversion funnels
- Automated two containerized deployment options: Docker Compose and AWS (ECS, Fargate, and EFS)
- Collaborated with a remote team of 4 engineers, including daily stand-ups and pair programming
- Authored a comprehensive technical case study detailing the problem domain, design decisions, and implementation challenges encountered while building Bard: *https://bard-rr.com* ↗

Other Open Source Projects 2020 – 2022

- RequestBin: A real-time Node.js application built with Express, MongoDB, PostgreSQL, web sockets, and Nginx to collect and monitor webhook requests
- Shopping Cart: A database-backed e-commerce app built with React, MongoDB, and Node.js
- Todo App: A Ruby todo list application built with Sinatra, ERB, HTML and JavaScript

💼 Professional Experience

Manufacturing Engineer May 2019 – Mar 2022 | Tulsa, OK
Arcosa Wind Towers

- Reduced tooling costs by 50K by rebuilding and automating the design process and eliminating opportunities for human error
- Improved the building of wind towers by studying, designing, and documenting manufacturing processes

🎓 Education

Full-Stack Software Engineering 2020 – present
Launch School

- Attended a mastery-based education program focused on software engineering fundamentals

BS in Mechanical Engineering 2015 – 2019
University of Oklahoma

🧠 Skills

Backend
Node.js, Express, Go, Ruby, PostgreSQL, MongoDB, Clickhouse, RabbitMQ

Frontend
JavaScript, React, HTML, CSS, Handlebars.js

Tooling
Docker, AWS (ECS, Fargate, EFS) DigitalOcean (droplet)
